

Leading the change beyond GHG emissions, our factory became the first in the glove manufacturing industry to disclose the results of our critically reviewed LCA, guided by the international ISO 14040 and ISO 14044 standards, for three of our key glove products.

**0.034073 kg CO<sub>2</sub>e**  
per glove

**0.034073 kg CO<sub>2</sub>e**  
per glove

Our first LCA, critically reviewed in accordance with ISO 14071 standards by TÜV SÜD, a global industry leader in environmental impact audits, covers the life cycle of our key products from the "gate" of raw material acquisition to the "gate" of finished products leaving our factory. By adopting this holistic approach, we are able to monitor and improve our operational and embodied carbon emissions – developing increasingly sustainable products whilst minimizing the environmental impacts so we can meet not only ours, but your sustainability goals as well.
